Would you survive to the Titanic?

Know this with the magic of machine learning

There are many factors that can influence whether you survive the Titanic. These factors include your age, sex, and whether you are alone. The Titanic was a large passenger liner that sank in 1912 after hitting an iceberg. The ship was carrying over 2,000 people, and only about 700 survived. The sinking of the Titanic was one of the most famous maritime disasters in history. It led to the creation of the International Convention for the Safety of Life at Sea (SOLAS), which set standards for the construction, equipment, and operation of passenger ships.

One of the most interesting aspects of the Titanic disaster is the fact that the ship was unsinkable. It was built with the latest technology and was considered one of the safest ships in the world. However, it was not equipped with enough lifeboats for all the passengers and crew. This was a major factor in the high death toll. The Titanic was also the first ship to be sunk by an iceberg.

The Titanic was a ship that was built to last. It was a ship that was built to be the most advanced and the most luxurious of its time. It was a ship that was built to be the most famous and the most successful of its time.
